

Energy End Use Database for the Calendar Years 2012 to 2016

The Energy End Use Database (EEUDB) provides a guideline on how energy is used in the New Zealand. It includes energy demand (both delivered energy and end use energy) by end use, fuel, sector, technology, transport and building.

The EEUDB draws information from a number of sources including the Ministry of Business, Innovation and Employment's Energy in New Zealand, Statistics New Zealand's NZ Energy Use Survey, Air New Zealand, Electricity Authority, Covec, Gas Industry Company Limited, KiwiRail, Bioenergy Association of New Zealand and New Zealand Geothermal Association.

EECA would like to thank all contributors for providing information to assist with this updated database.

This database was prepared by: Measurement, Insight and Reporting
